Abstract EN:

O1 DigiMedia - "QualiMedia" evaluation tool. Evaluation of digital educational media with quality criteria and an evaluation tool by teachers in adult education
An evaluation tool "QualiMedia" O1 for the evaluation of digital educational media was developed and developed for teachers in adult education. The evaluation tool is easy to use via the "DataMedia" database developed in the project. It was developed according to the following main criteria:
- Pedagogical content criteria;
- didactic-methodical criteria;
- Media-design criteria;
- Organizational-technical criteria.
The evaluation method for expert evaluation that has proven itself in the GPI Comenius EduMedia Award has been further developed into a practice-relevant evaluation tool for teachers in adult education. The evaluation tool was discussed, tested and disseminated in the workshops and multiplier events. The results of the evaluations with the new evaluation tool are determined with the help of the newly developed database "DataMedia" (IO2) with a star rating and are thus made available for further training practice. The evaluations offer teachers a thorough and quick opportunity to select and use suitable didactic digital educational media for their own courses and to deepen their digital competence. The evaluation tool was - linked to the "DataMedia" database, so that both entries with evaluations (digital educational media and media-supported teaching and learning concepts) can be made by the users and entries can also be evaluated by the users themselves.
The evaluation tool is integrated into the developing country-specific course models O3, tested in the multiplier events and discussed and disseminated in the meeting place "DigiMedia-Community (O4). The "QualiMedia" O1 evaluation tool was created to evaluate digital educational media and was designed for teachers in adult education. It consists of two parts:
 - Long versions of the evaluation criteria for 6 media categories as a theoretical and practical basis for
- Summaries of the evaluation criteria for 6 media categories as a practical application in the "DataMedia" database.
